Descriptif technique

Call-center

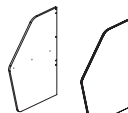

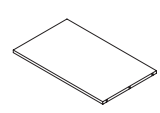

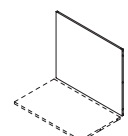

Les plans et les panneaux latéraux sont réalisés en mélaminé d'une épaisseur de 2,5 cm, disponibles en 3 longueurs: 80 - 100 - 120 cm et d'une profondeur de 60 cm. L'écran frontal est toujours en mélaminé d'une épaisseur de 2,5 cm.

Les plans sont séparés du panneau frontal de 4 cm, de façon que l'espace qui se crée entre les deux éléments puisse servir de passe-câble. Pour les deux versions, dans le panneau de division entre deux ou plusieurs postes, il y a un trou standard de 8 cm, utile pour le passage horizontal des câbles.
